## Hi-Speed<sup>®</sup> Dolly

### **In Good Hands**

The Collins G7 Hi-Speed Dolly introduces a more comfortable and ergonomic handle - it feels better, carries better and is here to help make your work better.

### **Low Maintenance**

No more grease - Collins G7 Dolly frames feature enclosed and supportive, self-lubricating bushings that allow the pivot points to stay lubricated and move freely, giving you more freetime from maintenance.

### **More is Less**

More features but still lighter in weight, more safety means less injury, more capability means less headaches, more strength means less work; get more done with a Collins Hi-Speed Dolly that requires less resources.

## Positive Transformations

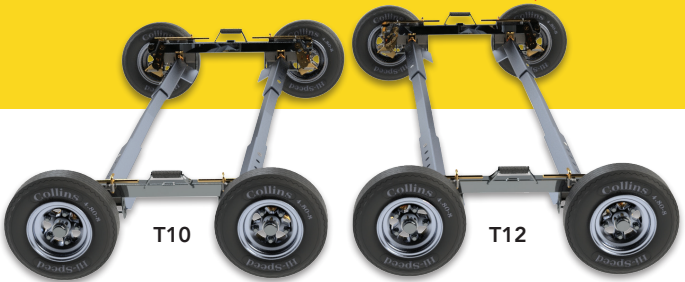

A new, wider cross rail axle with improved true-positive camber and strengthened aluminum tubing. Available in two versions-T10 & T12, with the T12 extending wide enough for dually pickups, utility and boat trailers. We beat our own records so you can have record-breaking performance.

## Last Longer

Steel-bodied frames with a zinc-plating finish are standard for Collins G7 & SLZ Hi-Speed Dollies. The zinc-plating finish provides better protection than paint or powder coat in extreme conditions and heavy use, protecting the underlying structural material when scratches, dings and everyday use occurs. Not just for show, these will continue to both look nice and work hard.
