A045

Loop-D-Loop Tool

Why Use Anything Else?

The A045 Loop-D-Loop™ Tool is a unique concept in auto opening. It is a double ended tool with each end having a different reach length. The A045 works most efficiently when used in conjunction with the A033 Separator Tool (see A033 instructions).

Designed to enter the passenger compartment, similar to an MCOT™ (Multi-Car Opening Tool.) The wire loop on the A045 is manipulated onto the button head, and the tool lifted to unlock the door.

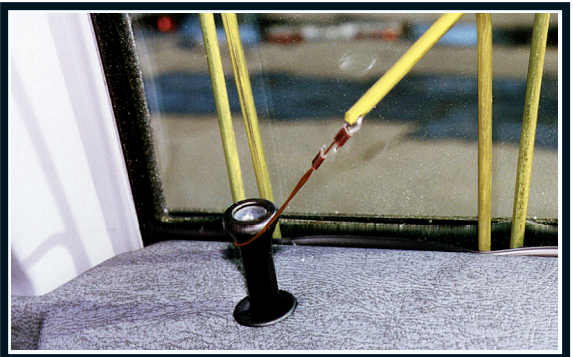

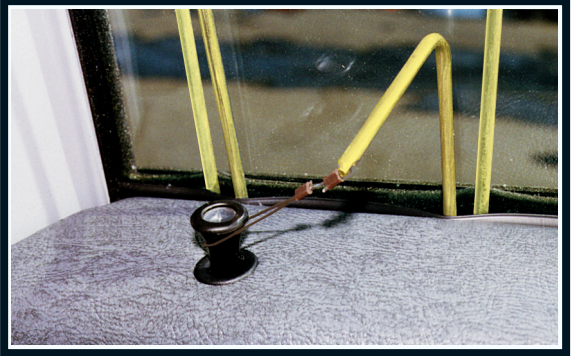

To use the A045, first insert a wedge. Insert the A033 Separator, lower and rotate.

Lift the tip up until it is inside the vehicle. Insert the A045, lower into the door cavity and rotate beneath the bottom edge of the glass.

Remove the wedge, work the tip of the A045 up into the interior, near the button head.

Manipulate the loop over the button head.

Twist the tool counterclockwise, pivot handle rearward and apply slow, steady upward pressure to unlock the door.

GENERAL APPLICATIONS : ACURA, BMWs in non-deadlock status, FORD, MERCEDES, MERCURY, VOLKSWAGEN, VOLVO vehicles and various other models.
