*Why Use Anything Else?*

## A042-A1

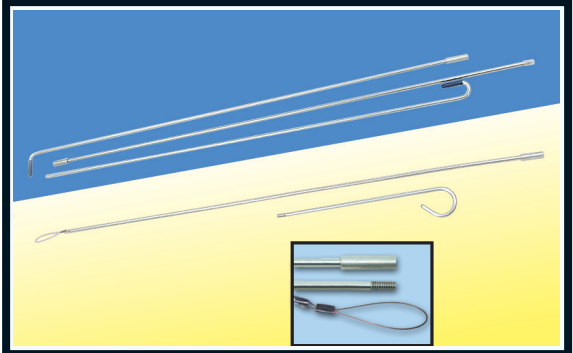

*Long Reach Accessory 1*

The A042-A1 Accessory tool for the A042 Long Reach tool is designed to easily access inside pull handles. Handles which are curved, rounded or located in recessed or tight spots are often times difficult to reach or grip with the A042 Long Reach Tool. With the A042-A1 this is no longer a problem.

This tool may be used as a stand alone tool or you can remove the handle and attach the loop portion to your A042 Long Reach Tool for even longer reach length. (See Photo 1).

To use the A042-A1 carefully insert a wedge between the window glass and the weatherstripping. Insert the A042-SL "Long Reach Tool Sleeve" between the edge of the window glass and the weatherstripping, leaving the flaps of the sleeve protruding from the opening. Separate and fold the flaps of the sleeve back around the edge of the window and the weatherstripping to create an opening for the A042 tool.

Insert the A042-A1 tool through the sleeve and through to the inside of the passenger compartment. Position the loop around the pull handle on the passenger door (See photo 2). Twist the tool 2 or three times to make the loop tighter around the pull handle. Pull the tool slowly toward you to lever the handle rearward to unlock the door. (See photo 3).

**GENERAL APPLICATIONS :** *This tool works on vehicles equipped with pull handles which you would access with an across the car type method.*
